

# Obika Leather+ cleaning instruction

---

## Instruction

Obika Leather+ consists of polyurethane, polyester and cotton with a leather-like surface that is dismissive towards fluid permeation.

The surface of Obika Leather+ is highly wear-resistant and durable under normal usage patterns.

Further product information regarding Obika Leather+ can be found on [Gabriel.dk](http://Gabriel.dk).

## Easy maintenance

Obika Leather+ is particularly easy to maintain, and stains can be wiped with a damp cloth.

If stains cannot be removed with a damp cloth, a blend of water with a low concentration of pH neutral soap can be applied. Avoid soaps that include aggressive chemicals.

## Disinfection

Disinfection has a negative effect on the durability of the fabric and shall therefore only be performed when it is unavoidable for the safety of the user.

Experience shows that disinfection with detergents containing ethanol, chlorine and other aggressive cleaning aids have demolishing effect on the polyurethane in the fabric. It is the user's own risk to use such detergent, as warranty will be repealed. If aggressive cleaning aids are used in spite of the deprecation, it is suggested subsequently to wipe the surface with clean water and, if necessary, sterile water.

## 5 year guarantee

Upholstery fabric from Gabriel is your guarantee of high quality and durability, and we give you a 5 year guarantee against wearing through in normal use.

The warranty will be repealed if possible damages can be related to the use of disinfectants.
